Hello Statistics Students,

We have received questions about what statistics courses offered in spring can be counted as a statistics elective for the major as some may not appear on your DARS report. We have several newer courses that are being offered in spring that WILL count as a statistics elective: Stat 433, Stat 443, and Stat 453. If you enroll in one of these courses for the spring semester, in February we will update your DARS report to count any of these courses towards your statistics elective requirements, if it does not automatically.

Additionally, if a course you are interested in is full, we encourage you to join the waitlist. While the waitlist is never a guarantee for enrollment, it gives you an opportunity to enroll in the course if a seat becomes available.

Please note that we will be unavailable for advising appointments and email inquiries from Thursday, December 24th through January 3rd. We will have advising appointments available beginning January 4th. If you encounter any enrollment issues during this time, please be sure to check out our Courses and Enrollment FAQ page.

Congratulations on completing another semester!

Alissa & Laura

Schedule a remote appointment with a Statistics Advisor through Starfish.
